

Bluetrace Technologies Pvt. Ltd.

Technology Innovation Partner for Presidency English School, Parbhani

Document ID BT-PRESIDENCY-PRO POSAL	Version v1.0	Revision R0	Date 2026-07-01
---	------------------------	-----------------------	---------------------------

This proposal positions Bluetrace as a long-term innovation partner for Presidency English School, Parbhani. The strategy focuses on AI, robotics, IoT, smart campus solutions, and teacher productivity rather than commodity website, ERP, or generic training services.

0. Corporate Credentials and Compliance

• Bluetrace Technologies Pvt. Ltd. is an incorporated private limited company.
• DPIIT Startup India recognition and MSME/Udyam credentials are available for institutional validation.
• Official approvals, registration certificates, and company letterhead are maintained in compliance records.
• Detailed supporting documents can be shared during due diligence on request.
• Certificate of Incorporation: verified and available
• Udyam Registration: verified and available
• Udyam Annexure: verified and available
• SPICE+ Part B Approval: verified and available
• Company Letterhead: verified and available

1. Strategic Positioning

- Bluetrace should lead with transformation, not software delivery.
- The offer should feel board-level, future-facing, and student-outcome oriented.
- Start with a zero-cost workshop to create trust and management confidence.
- Move the conversation toward a recurring annual partnership model.

2. Current Challenges in Schools

- Teachers: time-heavy question paper preparation, repetitive worksheets, and manual lesson planning.
- Students: passive learning patterns, limited practical AI/robotics exposure, and low project-based innovation.
- Parents: fragmented updates across WhatsApp, calls, circulars, and social media channels.
- Management: no integrated analytics layer, high reporting overhead, and slower data-driven decisions.
- Conclusion: Bluetrace addresses these issues through a unified Presidency Digital School Platform.

3. Presidency Digital School Platform

- The solution is not only a mobile app; it is the school's secure digital backbone.
- Core flow: Parent/Student/Teacher apps -> School Cloud Server -> Central Database -> Principal and Management Dashboard.
- Platform outcomes: attendance, homework, fees, circulars, admissions, bus tracking, and AI-enabled workflows in one system.
- This reduces communication confusion and creates one trusted source of truth for all stakeholders.

4. How the Platform Works (Operational Flows)

- Homework flow: Teacher uploads homework -> notification engine -> parent/student app -> submission -> teacher review -> dashboard update.
- Attendance flow: Teacher marks attendance -> central database sync -> parent notification -> management analytics.
- Fee flow: fee due generation -> parent reminder -> payment confirmation -> admin ledger and dashboard update.
- Circular flow: office publishes circular -> app push -> SMS/WhatsApp fallback -> parent acknowledgement.

5. Role-Based Digital Experience

- Parent app: attendance, homework, circulars, fee status, exam timetable, results, bus location, leave requests, teacher messages.
- Teacher app: attendance, homework upload, notices, marks entry, AI worksheet generation, lesson planning, parent communication.
- Student app: homework, learning videos, quizzes, assignment submission, certificates, AI/robotics activities, project portfolio.
- Principal and management dashboard: attendance trends, fee collection, admissions, teacher activity, engagement, transport, and complaints.

5A. Smart Wearable Student Safety Layer (Optional Pilot)

- Use case: optional Bluetooth wearable tag for transport and campus transitions to improve child visibility and parent trust.
- School bus flow: boarding and drop events can trigger parent app confirmation updates.
- Campus flow: classroom, library, and pickup zones can be mapped as event points without invasive continuous tracking.
- Safety by design: event-based monitoring, consent workflow, role-based visibility, and policy-aligned retention windows.
- Business value: stronger safety positioning, lower parent anxiety, and premium institutional differentiation.

6. Admin Control and Notification Backbone

- Admin panel controls students, parents, teachers, fees, timetable, admissions, transport, circulars, and reports.
- Notification strategy: app push first, then SMS/WhatsApp backup when needed.
- Every major communication can be acknowledgement-tracked to improve follow-through.
- This removes dependency on scattered message threads and missed updates.

7. Engineering Depth and Technical Credibility

- Bluetrace engineering stack includes Android, embedded Linux, STM32, nRF52, ESP32, BLE, PCB design, and cloud integrations.
- Capability extends from app workflows to device integrations such as RFID, bus GPS, and smart campus sensors.
- The same engineering team can deliver AI pipelines, IoT gateways, and production-grade connected systems.
- This is a major differentiator versus training-only or software-only vendors.

8. Presidency Vision 2030 Roadmap

- 2026: Teacher AI productivity rollout and unified communication platform.
- 2027: Student AI learning modules, robotics foundation, and project showcases.
- 2028: Robotics and IoT innovation lab with curriculum-linked practical programs.
- 2029: Smart campus expansion (attendance, transport, energy, and integrated dashboards).
- 2030: AI analytics-driven school operations and innovation-centered institutional positioning.

9. Investment Logic: Why Management Should Invest

- AI teacher tools -> saves planning and assessment effort, increasing classroom quality time.
- Digital school platform -> faster parent communication and reduced repetitive office workload.
- Robotics/AI programs -> stronger student outcomes and practical STEM profile.
- Smart operations dashboard -> better management visibility and faster decisions.
- Institutional outcome -> stronger school reputation and clearer admissions differentiation.

10. Revenue / Partnership Model

Option	Scope	Indicative Value
A	Teacher training	■20,000 - ■50,000
B	AI program for students	■500 per student per month
C	Innovation lab setup	■2 lakh - ■5 lakh
D	Annual technology partnership	■3 lakh - ■10 lakh per year

11. 90-Day Pilot Roadmap

- Weeks 1-2: free teacher workshop and management alignment.
- Weeks 3-6: platform pilot workflows for homework, attendance, and parent updates.
- Weeks 7-10: AI student module and innovation club launch with tracked outcomes; optional wearable safety pilot in one route/zone.
- Weeks 11-12: management review, KPI snapshot, and annual partnership proposal.

12. Student Storyboard (Cartoon Narrative for Management Pitch)

- Panel 1 - Morning rush: parent uncertainty before bus pickup creates stress and repeated calls.
- Panel 2 - Smart event: wearable + app confirms safe boarding in real time.
- Panel 3 - School day: homework and circular updates arrive in one trusted app channel.
- Panel 4 - Issue moment: delayed route or class change triggers guided alert and acknowledgement.
- Panel 5 - End of day: pickup confirmation closes loop for parent, school, and management dashboard.
- Panel 6 - Outcome view: fewer missed communications, faster escalation, and better parent confidence.

13. Why Bluetrace vs Generic Vendors

- Generic vendors mostly provide standard training; Bluetrace provides engineering plus training.
- Generic vendors are curriculum-limited; Bluetrace designs customized workflows, labs, and technical integrations.
- Generic vendors are often one-time service providers; Bluetrace is positioned as a long-term technology partner.
- Bluetrace combines app, AI, embedded, IoT, and cloud capabilities under one delivery model.

14. Next Step

Use this as the board-facing proposal that answers why to invest, what to deploy first, and how value will be measured. The recommended follow-up is a chairman/principal workshop and a 90-day pilot signoff focused on measurable adoption outcomes.
